Question 16: Word Frequency Distribution in Customer Reviews

16. Scenario: You are working on a project that involves analyzing customer reviews for a product. You have a dataset containing customer reviews, and your task is to develop a Python program that calculates the frequency distribution of words in the reviews.

Question: Develop a Python program to calculate the frequency distribution of words in the customer reviews dataset?

Aim: To calculate the frequency of words in customer reviews.

Algorithm:

1. Read customer reviews.
2. Convert text to lowercase.
3. Split text into words.
4. Count and display each word's frequency.

Code:

```
from collections import Counter
reviews = [
    "Product is good",
    "Good product and good quality",
    "Product quality is excellent"
]
words = " ".join(reviews).lower().split()
frequency = Counter(words)
print("Word Frequency:")
for word, count in frequency.items():
    print(word, ":", count)
```

Output:

Word Frequency:

product : 3

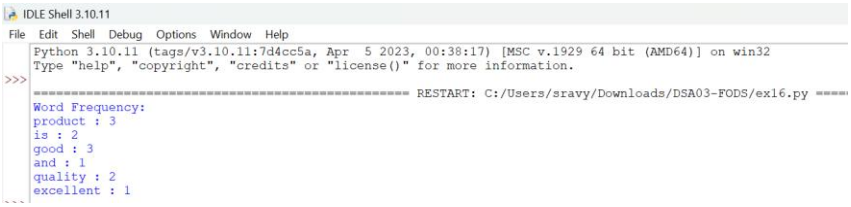

is : 2

good : 3

and : 1

quality : 2

excellent : 1

Result: The frequency distribution of words in customer reviews was calculated successfully.
